By subscribing to AMUNDI ETF DAX UCITS ETF DR, you are investing in a passively managed UCITS whose objective is to replicate as closely as possible the performance of the DAX NET RETURN (the "Index") regardless of whether it experiences a positive or negative development. The expected level of the tracking error under normal market conditions is indicated in the Fund prospectus.

The equities included in the composition of the DAX Index are derived from the universe of the most important securities in the German market. This covers the top 40 market capitalisations on the Frankfurt stock exchange.

More information on the composition and operating rules of the Index can be found in the prospectus and on www.dax-indices.com.

The Index is available via Reuters (.GDAXIN) and Bloomberg (DAXNR).

In order to replicate the DAX NET RETURN Index, the Management Company employs "index-based" management using the direct replication method consisting of investing in financial securities that are part of the DAX NET RETURN Index in proportions that are extremely close to those of the Index.
